FEEDFRESH®—ADDING INCREDIBLE VALUE AND PROFIT!

FeedFresh® silage covers combine proven product technology from our expertise in the grain and construction markets to produce the ultimate silage covering product. By utilizing our Dura♦Skrim® technology, we can offer the strongest cover available. Our experience with multi-layer gas barriers contributes to the ultra-low oxygen transmission rate (OTR) of this product. This allows FeedFresh® silage covers to provide superior strength and maximum forage freshness.

FeedFresh® OTR silage covers help both dairy and cattle producers to increase their bottom line, by maintaining high quality silage throughout the bunker for additional pounds of milk and increased weight gain-per-day.

LOWERING THE OTR

Input cost to harvest and store silage continues to rise, dramatically increasing the value of forage. When it comes to silage covers, FeedFresh® is no ordinary cover. It can significantly reduce feed waste by minimizing the amount of oxygen passing into the pile to preserve feed value. When the oxygen transmission rate (OTR) value is lowered, the silage will remain in a stable condition throughout the pile. FeedFresh® provides impressive results, by substantially lowering oxygen transmission and increasing overall value with a one-step installation. Basically, the lower the OTR, the fresher the feed—see how FeedFresh® compares!

IMPROVE YOUR RESULTS

FeedFresh® silage covers can help Dairy and Cattle Producers increase their bottom line by maintaining high quality silage throughout the bunker. By improving palatability results and increasing consumption through a more consistent feed intake, cows can produce additional pounds of milk for dairy producers and steer/heifer's can increase gain-per-day for cattle producers. Raven's exceptional 60 year history of product innovation, ISO 9001 certified management system, and our highest level of customer service and support, provide even more reasons to look to Raven for all your agricultural covering needs.

CUSTOMER TESTIMONIAL

"Prior to using FeedFresh® silage covers, we bagged haylage and built roll-over haylage piles, in both cases we experienced a fair amount of mold. The haylage we covered with FeedFresh® silage covers was pristine. The pile covered with FeedFresh® is by far the best haylage pile we have ever had at Cornerstone Dairy. Previously we consistently had four plus inches of moldy corn silage on our piles that needed to be removed prior to feeding. Since switching to FeedFresh® silage covers, we have experienced our cleanest corn silage ever, free of any mold, enabling us to feed out the entire pile. Other bonus factors when using FeedFresh® silage covers are the reduced labor required to deploy this oxygen barrier cover as it is available in one large piece, it is reinforced to withstand installation abuse and holds up to the punishing sun. After experiencing the impressive performance of the FeedFresh® silage covers, there is no compelling reason for us to ever switch back to the old way of covering silage!"

—Cornerstone Dairy

COMPARE LEADING OTR FILMS

Scale Comparison: The amount of force required to pull cover materials near the breaking point.

Golf Ball Comparison: FeedFresh® vs. competitive film using a golf ball to simulate direct impact force (similar to large hail), the competitor cover inverted to expose damage.

OXYGEN TRANSMISSION RATE (OTR)

Over 350 Times Less Oxygen (O₂) Passes Through FeedFresh® Silage Covers

OTR Rates Based on 21% Oxygen Transmission (Ambient Temperature)
